GRIFFING NURSERIES

1925 PRICE LIST

EVERGREENS AND CHARACTERISTIC SOUTHERN PLANTS

This Price List is not our Annual Catalog. It is a summarized edition quoting 1925 prices.

WE ANNOUNCE

our 1925 Catalog as a book of unusual beauty and value. It will be mailed only on request.

GRIFFING NURSERIES
BEAUMONT, TEXAS

Please Observe When Ordering

1st. This catalog cancels all previous prices, either in special lists, offers or catalogs.

2nd. Order early to insure getting the varieties and grades preferred. Write clearly, giving all necessary information. Use **Key Number** for grade, etc.

3rd. Five plants of a single grade and variety sold at the 10 rate. **Fifty plants** of the same grade and variety sold at 100 rate.

4th. Only **minimum** grades listed, herein. Plants may come between these minimum measurements and the **next higher** grade, but if of minimum size, shall be considered satisfactory delivery.

5th. Grading terms are explained as follows: Caliper for grafted or budded trees shall **mean diameter** above the bud or graft. Quality is in accordance with the following: "X" indicates **stocky plant**; "XX" indicates **bushy plant**; "XXX" indicates **very bushy specimen**. Other desirable characteristics are likewise included and so indicated when present. **For example**, a plant designated "XXX" would have a combination of the qualities going to make an **unusually choice plant**. Class concerns the manner in which plants are dug, whether they are lifted with a **solid ball of earth** which is encased in burlap and indicated "B", or removed without soil on the roots and packed in a **moisture retaining material** indicated "N. B."

6th. Substitutions are **never made** unless the variety or grade is exhausted. The customer should **specify a second choice** or leave this to our judgment. In the latter case only such other grade or variety would be used as **our experience would justify** as being equally satisfactory.

7th. An error or shortage **must be reported** immediately upon receipt of shipment so we **may rectify** it at once.

8th. Cash with orders for immediate shipment. C. O. D. orders will be shipped if 25% of amount accompanies order. Stock **will be reserved** for shipment at the customers convenience on receipt of 20% of the amount **in advance**. Transportation charges paid by customer.

GUARANTEE

All plants are guaranteed **true to name** full count, **up to grade** and in **good condition** when shipped. We will replace any plant proving **untrue to name**.

Our stock is the **highest quality**, thrifty and well grown, insuring success if **properly cared** for after transplanting in your soil.

As we have no control over their care and treatment after they are carefully packed and delivered, we can give no guarantee on the life of the stock; however, any just complaint will receive our careful consideration.

TO OUR FRIENDS

As the new planting season approaches we realize that you begin your plans for beautifying your home grounds. To help you in selecting your **trees and evergreens**, the shrubs and roses you will want, together with the **fruit trees** and vines you may desire to plant this season, we send you this 1925 Price List

To the **thousands** of old customers we express gratitude for the patronage of the past and other years. To the **new customers** we send our greetings and assurance of our appreciation of their orders. To all of you we continue to offer Horticultural Information, Landscape Service and the proposal to help you in the many scores of ways in which **40 years** of experience have equipped us.

40 Years In Business

With the thought that you want to know more about us and some of the pertinent facts of our history, a summary of the Griffing Nurseries as to their origin and business progress is offered for your information. We believe that our record will offer assurance of careful personal attention to your orders by men whose long years of training and experience make them exceptionally dependable and responsible.

Nearly forty years have elapsed since the Griffing organization began to supply trees and plants, from a smaller nursery on land owned by Father Griffing near Jacksonville, Florida, where five Griffing Brothers began nursery activities.

Conscientious and energetic in their work they followed out the best practices, and operating under the Griffing policy adopted at that time and religiously followed through all the years since, business flourished to such an extent that few years had elapsed before branch nurseries were established in southern Florida, Alabama, Louisiana and various points in Texas.

Griffing Brothers, as the concern was then known, set up records which have never been approached by any other concern in the quantity of trees and plants distributed, and so successful were their efforts that a reputation was thor-

oughly established, placing them on the highest plane among nurserymen and horticulturists.

As time progressed and each branch developed a great patronage, the production of stock at each location became more of an individual matter, it always being the purpose to grow and distribute only plants best adapted to the sections being served. As the Interstate Inspection Laws regulating the shipment of nursery stock became more intricate and complicated between States, it was decided to apportion the interests among the Brothers, letting each branch run as a separate concern.

In this way the Griffing Nurseries of today came into the ownership of W. C. Griffing, and continues to serve the southwestern territory in the best possible manner. Each year has shown phenomenal progress, not only in the management and organization, but also in the nature of the new plants produced.

At the present time the Griffing Nurseries are the largest growers of nursery stock in the southwest. Large enough to supply every want, yet specialized to such an extent that personal attention and supervision can be given every phase of the business.

This, in brief, is the history of the Griffing Nurseries of Beaumont, Texas.

Balling Perfected By Us

PLANTS SHIPPED EVERYWHERE

Balling and Burlaping (B) is lifting a plant with its root system intact or nearly so in a solid ball of the earth in which it grew.

Lifting a plant from Sandy, Gravel, Clay or Crumbling Soils, which fails to serve the purpose of protecting the roots from the air is NOT Balling.

Long ago we realized that for Evergreens especially, some such method was essential in the nursery business. Balling and Burlaping was by far the most practical. The difficulty lay in the fact that few soils were adapted for such handling. After close study of soils from Florida to Mexico, we found at our Rosedale Nursery the most IDEAL SOIL COMPOSITION and STRUCTURE. A black, waxy, fertile soil of the greatest tenacity has made the Griffing Balled and Burlaped plants known throughout the country.

SERVICE BULLETINS FREE

We have obtained and Disseminated Information of great value which is contained in the following Service Bulletins, a few of which are now available.

GRIFFING'S SERVICE BULLETINS. No. 66, "The Pecan;" No. 76, "The Fig Tree;" No. 56, "Shade and Ornamental Trees, Shrubs and Landscaping the Home."

Our balled plants (B) ship better, arriving in splendid condition, ready to plant and show up at once in full leaf. They grow better, having suffered no set back by root injury. They give immediate effect in landscape plantings. They take the low freight rates in Texas and Louisiana. Planting is easier and quicker, the maintenance is less. When doing your own landscape planting you can place Balled plants about on the ground and see exactly how they will look before planting them.

Balling is insurance against loss and most of our customers now demand it. Balled plants mean satisfaction and greater beauty in your planting with the best and most dependable material.

Inquiries concerning rates, weights, sizes etc. will be gladly and promptly answered. If you have used our material you know the value of our Balled stock. If you have never used it, you need only a trial order to be fully convinced that Balled plants are best. Once a customer, always a customer, is our experience with Balled plants.

SYMBOLS USED

For greater simplicity Balled stock is indicated by the letter "B" in column headed "Class". Stock not Balled (dug bare rooted and packed in damp straw or other packing material) is indicated in this column by the letters "N. B."

Why Griffing Trees Are Better

KNOWLEDGE AND SKILL GO INTO PRODUCTION

Long ago we were considered pioneers in the landscape development of the southwest. Many of the most beautiful parks and home grounds in and around Beaumont were laid out and planted by us, and are now growing as permanent memorials to our activities. We take pride in showing our friends and customers these plantings when they visit us, and as they vary in age of planting from one to eight years, a customer can also ascertain the character and ultimate size of the plants, etc., by visiting these plantings.

SPECIALIZED ABILITY

Recognition of our efforts has come year after year from landscape men and customers throughout the territory we serve. This is the age of specialists. We specialize in growing first class landscape material. We keep in close contact with landscape development and have experts, college graduates, in our employ to work out these problems in order to assist our customers and help point out their needs and requirements.

EXPERIMENTAL WORK

The growing of ornamental stock has been developed to a high degree at our nursery. Many new plants from other sections and countries

Corner in Beaumont's Most Beautiful Park Just After Being Laid Out and Planted by Us

are added to our test block in an experimental way, every year, until their adaptability has been proven. Our descriptions are based on local conditions and plant habits in our nurseries. The nature of the old and the new, has been so carefully studied that we are able to produce plants far superior to the ordinary nursery-row plants. Our stock is spaced and pruned in such manner that each plant is permitted to attain maximum development and perfection in the nursery row. We select for propagating purposes only plants which seem to excel the ordinary type. Through this continued process of selection our Broadleaf and Coniferous Evergreens have attained such a marked degree of beauty that they seem to differ considerably from the plants grown in the old way.

OUR FRUIT TREES EVERYWHERE

We also grow all the best varieties of fruit trees and various other classes of trees and plants adapted to the southwest, and we have supplied hundreds of thousands of splendid trees now producing fruit for their owners. Our advice in regard to varieties will be gladly given.

NO AGENTS

OUR PLAN IS SAFER FOR YOU

"GROWER TO CUSTOMER"

We Deal Direct—You are not annoyed by and do not have to buy from agents working on commission and interested only in the amount of your order. We are building bigger business—Successful growth for forty years.

Glossy Leaf Privet with Conifers and Vines Give Ideal Landscape Effects

PERSONAL ATTENTION AND OPERATING EFFICIENCY

Our business has the personal direction of the owner, whose wide travel and extensive knowledge makes this feature a point worthy of consideration to the amateur horticulturist. Our office management is such that we are often told that of all the nurseries operating in the South we have the most businesslike and efficient system for handling orders, stock records, correspondence and other aspects of the business which are concentrated in our central office, at Beaumont, Texas, in the heart of the city, where we have the maximum convenience in all modern business facilities.

Our General Offices and Display Grounds in the Heart of Beaumont's Business District

USE THE KEY NUMBERS FOR TIME SAVERS

ORGANIZED FOR SERVICE

Our nurseries are directed by men of long experience, and every department is handled by a specialist in his particular line, a thing which is impossible in small concerns where one man must serve in a multitude of capacities. All of this means better service and greater efficiency in handling your orders.

Manager's Home, Rosedale Nursery

THE BEST FACILITIES

We have our own loading stations convenient to the nursery where scores of solid cars of nursery stock are loaded most promptly each season exclusive of the local freight, express and parcels post shipments which are numbered by the thousands. We have 300 acres in nursery rows producing trees and shrubs. A portion of this is the heavy black land of the Gulf Coast, which is so extremely fertile and well adapted to the production of evergreens. Better color is given to the foliage and more stocky development to the individual plants. Irrigation facilities are available at the Rosedale Nursery and during any prolonged drought we are able to thoroughly water the nursery which is a great economic feature.

Whether your problem is to beautify a small plot in a congested city district, to produce a harmonious landscape setting for the suburban home or country estate, or to design a cemetery or park, you will find our landscape department prepared to give you the exact information you need. What to plant, where, how, and when, and an approximation of the cost—this is the service we offer you.

OTHER ADVANTAGES

We are also located at Kountze in the sandy hill section where conditions are ideal for the production of certain kinds of nursery stock. Solid clay soils make production of pecans very successful, and the specific requirements of good rose production and certain other ornamentals are fully met at this location. Here we have also natural flowing water to care for the propagation of plants, a newly developed division, which is probably producing more plants than any other such concern in the South. A combination of all these features indicates how thoroughly we are equipped for the business which we have developed, and it is a basis for our request for your patronage.

Concrete Road to the Nursery Through the Pines

Standardized Plant Names

Plant names in this book are in accordance with the American Association of Nurserymen's "Standardized Plant Names", a book produced after eight years of work in eliminating the existing confusion among the names of plants. Some of our varieties were not introduced or in general usage prior to the publication of this work, and hence botanical or Latin names have not been applied in these instances, in accordance with the recommendations of the committee

appointed for the task. Reliable horticulturists and nurserymen are using these names for the advantage of their patronage. We are pleased to comply with the standardization and recommend for our customers the general usage of the Common or English names in preference to the Latin derivatives. But we list the Botanical and all common names generally known. Look for the plant you want in the index.

Oleanders in the Nursery. Quantity and Quality Mean Good Values for You

DON'T LIFT SMALL BALLED STOCK BY THE TOPS—LIFT THE BALL

Trees for Your Home

Where You Need Them and Why

Taking for granted you have a home in which you live, your first interest is in beautifying the grounds immediately about it. Plant a number of choice shrubs near the entrance and bank against the foundation and walls, increasing the number of plants at corners and along blank wall spaces where no windows intervene. Keep your lawn clear and open.

Open Lawn and Border Planting

Evergreens should be generously used in the South with a generous sprinkling of the gorgeous types found in the Deciduous shrubs.

A few trees for the street or shade on the lawn will then be needed. Use Camphor, Arizona Ash, Tallows, etc., or Palms. They are rapid growing, beautiful and clean, not littering the lawn with dead leaves, but permitting the smooth, open stretch of green grass essential to any beautiful home.

The back yard should then receive attention with the planting of fruit trees so that from your own yard you may have figs, Persimmons, Oranges and other fruits you may desire. Plant a good number and several varieties so that a continual supply may be had most of the year. What you do not eat fresh may be canned or preserved. Plant your garden between the trees, cultivating well and fertilizing heavy. You get both fruit and vegetables in quantity. Put grape vines on the fence or trellis.

A pecan tree or two of good varieties, well cared for, will bear much quicker than you think and no Texas or even Southern home should be without at least one of these fine trees.

At the side or back of the house some small area should be devoted to roses. Every woman loves the Queen of Flowers and for the pleasure of the ladies the family Rose Garden, even though it be small, is an essential part of the home grounds.

Many people prefer hedges for enclosing their property. Trimmed hedges in front and untrimmed in the rear or high, tall growing borders will give you privacy and seclusion combined with beauty at less than the cost of fences.

If you want lilies, bulbous plants, and annual flowers, you will find the rear the best place for them, grouped in a garden. They can be better attended, do not detract from the lawn beauty when fall comes or the hot sun burns them, and cutting for the house does not destroy their effectiveness.

Commercial Horticulture

Fruit Trees Profitable in the South

If you are interested in commercial planting, the first consideration is soil. A good soil is essential. Fruit trees cannot grow on a poor soil any better than any other crop. Select a fruit requiring the kind of attention you can give and one which you can harvest and market. Any good fruit brings high prices on the market if delivered. Don't grow a fruit crop commercially if you will neglect the harvest for other matters. Take care of your orchard, cultivate, inter-crop, fertilize. Prune and spray your trees. Fruit trees produce more to the acre than any other crop you can grow. Specialize on the thing you are interested in and it will repay you a thousand times for all cost and care. A little investigation will show you beyond doubt that orchards, taken care of, pay well and the fruit growers in the Coast country are making more per acre than other farmers and their income is sure and steady with little outlay.

NUMBER OF TREES OR PLANTS TO ACRE

Distance apart—feet	No. of trees	Distance apart—feet	No. of trees
1x1	43,560	18x18	134

Coniferous Evergreens

Nature has Conifers in all climes and our most beautiful natural landscape scenery is frequently dominated by these long lived evergreens of constant beauty. Our plants have been selected and chosen after long decades of experience with hundreds of types and varieties. Those we grow are dependable. By growing from cuttings we maintain the original true type while we also offer some selected seedlings at reduced prices. Opposite each name is indicated whether grown from seed or cuttings.

Arborvitae

Visitors to our nurseries never fail to enthuse over the beautiful blocks of Arborvitae (Thuja). Many common types of Arborvitae are widely grown and familiar to most planters. The new varieties produced during recent years have replaced many of the coarser types. Rich color and perfect form have been attained by careful selection and expert propagation.

CHINESE OR ORIENTAL ARBORVITAE (Thuja Orientalis)

This class has been formerly called *Biotas* by the Southern Nurserymen. It contains those varieties which have the foliage flattened, edge outward. The best arborvitae for the South are in this group which offers every type of form and color desired.

Landscape Groups—Conifers Predominating

BAKERS HYBRID

BAKERS HYBRID (T. Orientalis). Grown from cuttings. A fine pyramidal type which is unexcelled for its tall, columnar growth, filling a place in ornamental planting for which there has been a great need. A hybrid product, it has all the good qualities of the Oriental class, vigorous growth, intense coloring and distinctive appearance.

Key	Class	Quality	Height	Each Rate	10 Rate	100 Rate

6R5	B	XX	1½ ft.	3.20	2.60	2.15

Beautiful Planting Illustrating Value of Conifers

BONITA

BONITA (T. Orientalis) Grown from cuttings. We have limited quantities. This new variety is said by many to be the most beautiful which is the origin of its name Bonita, meaning in Spanish "Pretty." The foliage is different from the other varieties and is very compact, the individual leaflets lie perfectly flat and in close layers, edge outward. Very deep green in color, the metallic blue of the blossoms in season makes delightful contrast. Very slow in growth; used where dwarf types are preferred; never becomes shaggy. Plant where a full compact oval is desired.

Key	Class	Quality	Height	Each Rate	10 Rate	100 Rate
1R5	B	XXXX	3 ft.	14.20	11.85

3R5	B	XXX	2 ft.	7.90	6.60	

A Hardy Selection of Our Plants Used Above the Coastal Belt

BERKCMANS GOLDEN

BERKCMANS GOLDEN (T. orientalis). Grown from cuttings. Dwarf Golden and Aurea Nana. A fitting companion for the Bonita. As contrast for shades of green this variety is greatly in demand. Rich golden color very pronounced in Spring and Summer. Slow growing to five feet or more. Very compact and symmetrical.

Key	Class	Quality	Height	Each Rate	10 Rate	100 Rate
1R5	B	XXX	4 ft.	12.20	10.00

EVERY "X" MEANS ADDITIONAL QUALITY AND DESIRABILITY

Correct Usage of Tall Conifers

Pyramidal Conifers in Formal Planting.

CHINESE COMPACT

CHINESE COMPACT (*T. orientalis*). Grown from seed. Objection to the common Chinese arbovitae is the open method of branching, the lack of density in this foliage, and the resulting coarse quality. We carefully chose from thousands of plants those which show exceptionally dense foliage and attractive form. Light green color. Broadly cone shaped.

Key	Class	Quality	Height	Each Rate	10 Rate	100 Rate
1R5	B	XXXX	7 ft.	10.50	8.75	
2R5	B	XXXX	6 ft.	9.00	7.60	
3R5	B	XXXX	5 ft.	7.50	6.25	5.00
4R5	B	XXX	5 ft.	6.50	5.50	4.40
5R5	B	XXX	4 ft.	4.75	4.00	3.20
6R5	B	XXX	3 ft.	3.50	3.00	2.40
7R5	B	XX	2 ft.	2.00	1.70	1.40

CHINESE PYRAMID

CHINESE PYRAMID (*T. orientalis*). Grown from seed. Through careful selection we have grouped in this class those plants having dense foliage and compact form but with narrow pyramidal shape. In quality and beauty they equal the Compact Chinese and differ in form only. These classes are being used in preference to the common Chinese which lacks uniformity and general quality.

Key	Class	Quality	Height	Each Rate	10 Rate	100 Rate
1R5	B	XXX	7 ft.	7.00	5.90	
2R5	B	XXX	6 ft.	6.00	5.00

6R5	B	XX	2 ft.	2.00	1.70	

Young Coniferous Evergreens as We Grow Them

COMPACT GREEN

COMPACT GREEN (*T. Orientalis*). Grown from cuttings. Another new variety of the highest type. Our stock is the only lot we know of. The color is rich light green; compact, pyramidal, no other variety we have grown is exactly like it. It seems to be one of the best introductions for general use.

Key	Class	Quality	Height	Each Rate	10 Rate	100 Rate
1R5	B	XXX	5 ft.	8.50	7.40	
2R5	B	XXX	4 ft.	6.90	5.75	4.80
3R5	B	XXX	3 ft.	5.65	4.70	3.90

GOLDSPIRE

GOLDSPIRE (*T. Orientalis*). Grown from Cuttings. Formerly called *Conspicua*, and sometimes called *Elegantissima*, over which it is a great improvement. The name of this most beautiful Arborvitae is well chosen, very aptly describing its characteristic beauty. Tall and slender, tapering gracefully from a comparatively narrow base to a shapely pointed tip, it is truly a gold spire among the other shrubs and plants with its bright display of rich golden foliage, more pronounced than in any other variety.

They have very high quality, suited to the finest grounds.

Key	Class	Quality	Height	Each Rate	10 Rate	100 Rate
1R5	B	XXX	8 ft.	18.75	15.60	
2R5	B	XXX	7 ft.	16.25	13.40	10.80
3R5	B	XXX	6 ft.	14.20	11.80	9.40

ORIENTAL PYRAMIDAL

ORIENTAL PYRAMIDAL (*T. Orientalis*). Grown from cuttings. One of the best arbovitae grown. Ours are very symmetrical, heavy foliaged and exceptionally compact. Tall slender cone shaped. Light green color.

Key	Class	Quality	Height	Each Rate	10 Rate	100 Rate
1R5	B	XXX	8 ft.	13.25	11.00	
2R5	B	XXX	7 ft.	11.75	9.80

We are Evergreen Specialists. Our Conifers are a hobby with us.

TEXAS BLUE

TEXAS BLUE HYBRID (T. *Orientalis*) Grown from cuttings. Texas Glauca. The blue color of this variety is its distinctive quality. A beautiful new variety with soft blue foliage, strong growing, upright, pyramidal. This is the only member of the Biota family with such form and delightful color.

Key	Class	Quality	Height	Each Rate	10 Rate	100 Rate
1R5	B	XX	5 ft.	7.80	5.50

4R5	B	XX	2 ft.	3.20	2.60	2.10

BEEFWOOD

BEEFWOOD, Australian Pine. (*Casuarina Stricta*) Grown from seed. One of the fastest growing evergreen trees known. Resembles the pine tree in many respects. Stands cold to about 20 degrees above zero after trees are a few years old.

Key	Class	Quality	Height	Each Rate	10 Rate	100 Rate
1R5	B	XX	7 ft.	7.00	5.90

Cypress

Some of the most distinctive conifers are among the many varieties of Cypress. All have high quality and are suited for prominent positions.

ARIZONA

ARIZONA CYPRESS (C. *Arizonica*). Grown from seed. Beautiful blue or glaucous pyramidal tree, horizontal branching, dense foliage. Attains forty feet, making perfectly shaped specimen.

Key	Class	Qual.	Ht.	Each Rate	10 Rate
1R5	B	XX	6 ft.	11.00	9.20

ITALIAN

ITALIAN CYPRESS (*Cupressus sempervirens*). Grown from seed and cuttings—Tall growing evergreen of slender, upright habit. The tall dark green columns used in many of the South's best landscape plantings. Our plants are propagated from extra compact, narrow trees of vigorous growth, reaching an ultimate great height. Used at entrances, corners, along porch columns, and as a high point for shrub groups.

Key	Class	Qual.	Ht.	Each Rate	10 Rate

Italian Cypress

Large Conifers should have solid balls. Our soil gives us a natural advantage. The big specimens hold up and grow well.

Junipers

The red cedars indicated the great adaptability of fancy Junipers for Southern planting and during recent years we have collected and grown a stock of finely assorted varieties in all forms, types and colors. They give low shrubs, so much in demand, without the compact formal shape of the Arborvitae. Everywhere they have met great popularity and for the best planting a collection of Junipers gives the greatest distinctiveness. We are evergreen specialists and the class of stock we produce in the Juniper group is unsurpassed anywhere.

COMMON

COMMON JUNIPER. (*J. communis*). Grown from seed. Silver blue color, irregular growth. Very satisfactory for banking purposes, being lower priced than the selected specimen forms described below.

Key	Class	Quality	Height	Each	10	100
				Rate	Rate	Rate
1R5	B	X	5 ft.	5.00	4.20	
2R5	B	X	4 ft.	4.00	3.40	2.70
3R5	B	X	3 ft.	3.00	2.50	2.00
4R5	B	X	2 ft.	2.00	1.70	1.40

PYRAMIDAL

COMMON PYRAMIDAL JUNIPER (*J. communis J. communis pyramidal*). Same color and characteristics as the Horizontal except in form. Growth is tall and slender. A splendid pyramidal conifer.

Key	Class	Quality	Height	Each	10	100
				Rate	Rate	Rate
1R5	B	XX	6 ft.	9.00	7.50	6.00
2R5	B	XX	5 ft.	7.50	6.30	5.10
3R5	B	XX	4 ft.	6.00	5.00	4.00
4R5	B	XX	3 ft.	4.50	3.80	3.00

HORIZONTAL

COMMON HORIZONTAL JUNIPER (*J. communis J. communis horizontalis*). Grown from seed. Selected Common Junipers having branches parallel with ground tapering from wide base to pointed tip. Very attractive, used instead of Decadra Cedar.

PFITZER

PFITZER JUNIPER. (*J. chinensis*). *J. pfitzeriana*. Grown from cuttings. The handsomest of the Chinese Juniper varieties, the Pfitzeriana is the most satisfactory spreading Juniper in this climate. We have found it ideal for the Southwest. Unusually beautiful in its distinctive grayish color and irregular, flat spreading growth. For the terrace planting, prominent low groups, about foundations, and as specimens it can not be excelled.

Key	Class	Quality	Height	Each	10	100
				Rate	Rate	Rate
1R5	B	XXXX	4 ft.	10.00	8.40	
2R5	B	XXX	3 ft.	7.50	6.30

4R5	B	XX	2 ft.	3.50	3.00	2.40
5R5	B	X	1½ ft.	3.00	2.50	

Prostrate (Canada) Junipers

SAVIN

SAVIN JUNIPERS (*J. Sabina*). Grown from cuttings. This type while not so flattened as our more spreading types, is hardy vigorous grower, main stem lying close to the ground and lateral branches growing upwards. Rich, green color.

Key	Class	Quality	Height	Each	10	100
				Rate	Rate	Rate
1R5	B	XX	3 ft.	7.50	6.25	
2R5	B	X	2 ft.	5.00	4.20	
3R5	B	X	1½ ft.	2.90	2.50	

SPINY GREEK

SPINY GREEK JUNIPER (*J. excelsa*). *J. excelsa stricta*. Grown from cuttings. This little Juniper is very popular for its bright bluish, color, compact growth, and pyramidal form. Excellent for conifer groups, for specimens or for tubs and urns.

Key	Class	Quality	Height	Each	10	100
				Rate	Rate	Rate
1R5	B	XX	1 ft.	3.00	2.80	2.20
2R5	B	X	9 in.	2.00	1.70	1.40

RED CEDARS

RED CEDAR (*Juniper virginiana*). Grown from seed. The well known Southern type. Beautiful trees. Can be sheared.

RED CEDAR (*Juniper virginiana*). Grown from seed. Platte River Type. Bronze winter color very distinctive.

4R5	B	X	4 ft.	4.00	3.40	2.70
5R5	B	X	3 ft.	3.00	2.50	2.00

Evergreens, whether in winter or in summer, are a permanent pleasure. A home in a pretty setting of Evergreens is a picture of warmth and comfort in winter, and is cool appearing and as inviting a retreat in summer as the virgin forest.

Broadleaf Evergreens

The popularity of **Evergreen** plantings has increased materially, especially in the South, during recent years. We firmly believe that no other nursery offers so many varieties of **Broadleaf Evergreens** or **Conifers** in the quantity and quality of stock that we offer. Visitors from the North tell us that our nurseries in winter look fully as attractive as theirs do during the summer. All plants in this catalog will give entire satisfaction in the way of strong vitality, vigorous growth, freedom from insects and disease pests. We have visited throughout the country in an effort to collect all available varieties that might prove adaptable to the conditions of the southwest.

ABELIA

GLOSSY ABELIA (*Abelia Grandiflora*) A hardy, free-blooming shrub with shiny, purplish, evergreen leaves, bears a profusion of clusters of tubular-shaped flowers about one inch long, white inside. Fragrant blooms last all summer. Very desirable. Trained for banking and foundation planting. We hand prune them frequently during the growing season to produce compact, uniform plants. You will want a big order from our fine blocks.

While our prices are as low as any, yet our aim is not to be the cheapest; value is our big consideration and aim. Constant care bestowed upon trees in bringing them to the best nurtured condition makes for cost. We could reduce nurturing costs and consequently selling costs, but that would not be giving Quality and Value. The Best Value for the Money—that is our desire.

CAMPHOR TREE

CAMPHOR TREE (*Cinnamomum Camphora*) **Bush form.** Throughout the coastal region the Camphor tree is known for the rich evergreen foliage so characteristic of the lower South. In few trees or shrubs do we find such marvelous color changes. The new growth as it comes out in spring is a wine and bronze color before it develops, and certain of the older leaves are constantly acquiring a bright vermillion red.

CAPE JASMINE

CAPE JASMINE (*Gardenia Grandiflora*). The old Southern favorite, with glossy evergreen leaves and masses of waxy-white flowers; very fragrant. Attains excellent height for foundation planting, massing and for lawn specimens. Widely grown, hardy. The characteristic plant of the South. Blossoms highly valued in the North, where it is known as the Gardenia, of which romantic authors have written so freely.

CHERRY LAUREL

CHERRY LAUREL, CAROLINA (*Laurocerasus carolinian*). Wild Peach. Southern Laurel. One of the most beautiful broad leaf evergreens. Glistening green foliage of medium shade. Upright growth, attaining considerable height. Can be shaped to any desired form and kept at any height. We have trained some wonderful specimens adapted to prominent use in fine plantings where tall, shapely evergreens of wide or narrow cone shapes are wanted. Always beautiful, the white plum-like blossoms of the Cherry-Laurel make it highly desirable for spring effects. We offer the finest block of choice plants we have ever grown, filled out well and showing the highest quality. No recommendation can be too high for these beautiful plants.

FIREBUSH

NEPAL FIREBUSH (*Pyracantha crenulata*). *Crataegus*. Hawthorn. Japan. An excellent tall-growing shrub, bearing white flowers in the spring, followed in the autumn by clusters of bright red berries.

YUNNAN FIREBUSH (*Pyracantha yunnanensis*). China. A variety of *Pyracantha crenulata*; but a more vigorous grower, with larger leaves. In the fall and winter there is nothing more striking than a specimen of this plant with its glossy green foliage acting as a background for great masses of red colored berries.

Oleanders

BALLED OLEANDER

The Characteristic Shrub for the Gulf Coast

PINK AND WHITE

OLEANDER (Nerium). Pink and white. Oleanders are the standby for Southern planters. More effect for the money can be had with them than with any other plant. They transplant well, and bloom the first season. For tubs and containers they have long been favorites and are coming into greater demand again after a few years decline of this usage. We have the most vigorous, stocky, uniform bushes to be found. You will find their generous use most pleasing. The two varieties listed here are the strongest growing of the more generally planted kinds.

Help your Schools, Churches and Other Public Property obtain Trees and Shrubs for the benefit and beauty of the community.

NEW RED

OLEANDER, RED. This variety has blood red blossoms of striking beauty. Side by side with other kinds we have seen them withstand freezing weather without injury to a single leaf. All Oleanders come up from the roots after severe freezing, but this variety seems to be unusually resistant.

FANCY OLEANDERS

FANCY VARIETIES. We are Oleander Specialists and for years have been growing the best varieties. Annual trips over the coast country in search of new types have brought our stock to the point where we list more accurately described types than any firm we know. As novelties for your home plantings you will find these to be most beautiful. We will only sell a limited quantity of each variety, and suggest that you place your order early.

Photinia

PHOTINIA, LOW (*P. serrulata*). *P. dentata*. One of the finest evergreens and one that is being used more and more during the past few seasons. Moderately upright. Large leaves of dark green with new growth first dark red, then tan and fawn color, and in winter some of the old leaves crimson. We have never offered more beautiful specimens of this variety than we are now growing. For variety in your plantings use Photinia.

Silver Leaf

LEUCOPHYLLUM (*Leucophyllum texanum*). Mexicans call it Senisa. A most beautiful shrub of medium growth. Leaves small, oval form, ashy gray or silver color. Its name means "White Leaf," and no other shrub has such striking beauty in this sense. Blossoms in early spring, are violet-purple, very showy and heighten the effect of the silvery leaves. Not widely cultivated, but is destined to become one of the most popular shrubs of the Southwest. Is found native along the Rio Grande and in desert sections. Withstands drouth.

The Finest Broadleaf Evergreens The Privet (*Ligustrum*) Group

Griffings Southern Selection

All The New And Popular Varieties Offered

A group essential to landscaping. The word, **Privet** (*Ligustrum*) refers to a large family of plants whose individual members are widely different in their various characters. The group is by far the largest and most generally successful among our broad leaf evergreens. Individually and as a group, their beauty is unrivaled. All of the privets are valuable for ornamental planting because of rich coloring; clean habits; vigorous, healthy nature. Panicles of fragrant white blossoms are borne profusely in spring followed by showy fruits in shades purplish to black resembling wild grapes.

Our early recognition of the beauty and importance of this great group caused us to devote the closest attention to the observation, selection and development of the various types, and with recent introductions we have made, together with those contemplated for the future, we have observed the need of a simple classification of the pronounced types for the convenience of our customers and with the idea of encouraging greater familiarity with the new varieties among the many people who have learned the beauty and value of this group in their landscape and ornamental planting, we have prepared the following classification based on very broad principles.

Thick Glossy Leaf Type (*Lucidums*)

The glossy leaf type is marked in having very glossy or shiny foliage of rich, dark green color shading from almost black in some varieties to a light mottled effect in others. Height varies from low to tall and nature of growth is widely different in various varieties. This is probably the most distinctive type and has the highest quality and best texture in the family.

TEA PLANT (*Thea sinensis*). The Tea of commerce. Broad-leaf evergreen. Beautiful glossy dark green foliage. Blooms early and is attractive. Good for mass planting or specimens.

Key	Class	Quality	Height	Each	10	100

2R5	B	XX	1½ ft.	3.00	2.50	
3R5	B	X	1 ft.	2.00	1.70	

Pittosporum

TOBIRA (*P. Tobira*). An evergreen unequalled in desirable quantities. Can be sheared to any desired shape or permitted to grow informally, forming a very bushy, compact, wide-spreading shrub. Small creamy blossoms of delightful fragrance.

Key	Class	Quality	Height	Each	10	100
				Rate	Rate	Rate

Griffigs Wax in Nursery

Crinklyleaf

CRINKLYLEAF. A new variety of our own origination. A sport from the Graceful or old Nepalense type. Leaves medium size, pointed, very glossy and thick, distinctively twisted, making a most unusual effect. Fine for specimens or massing. As good as most Lucidums with a more striking appearance. The blackish green color so desirable is had in this new variety. Growth is upright but very full.

Key	Class	Quality	Height	Each	10	100

Worthy of its Name, Griffigs Wax Leaf

Griffigs Wax

GRIFFINGS WAX. Japanese Compact Wax. *Ligustrum Lucidum Compacta.* Wax leaf. The finest broadleaf evergreen grown for the Southland. We obtained it in a bankrupt stock of the Alvin Japanese Nurseries, in a large shipment of *Lucidum Privets* imported from Japan. This one plant was a sport or mutation. The unusual beauty of it was instantly noted by us, and it was carefully segregated and stock propagated from it. Grafting was practiced altogether to keep the type true. Then it was placed on the market. No ornamental shrub has sold to such an extent. Each year we have sold many solid cars of this variety alone, and many customers were turned down because the supply ran out.

The leaves are very thick and waxy, the upper surface being highly glossed of black-green color and the under side of much lighter shade. Ideal in form and development. Our stock is symmetrical and uniform. Transplants with the most remarkable success, never shedding a leaf, and is the most popular plant on the Southern market. It sells on sight. Where it is known it is demanded in all plantings. Do not confuse Griffigs Wax with the common *lucidums* on the market which resemble it to some extent, but do not have the dark color or high gloss, nor the compact form. The Griffigs Wax grows in the shade or full sunlight. It is not injured by rain drips. In any difficult place it will thrive better than other evergreen or ornamental plants.

Attains 6 feet and more, but so wide and compact in form that it is readily pruned and kept at any height desired. Is used for hedges of high quality, for beautiful groups and masses in every location, and as specimen plants about houses and grounds. Can be sheared into perfect forms like the laurel and bays of England and Holland. Used in tubs with great success. For best effects use Griffig's Wax and be sure of the result. Never injured by insect or disease in all the time we have grown them.

GRACEFUL

GRACEFUL. Formerly called *Ligustrum nepalense* and *Lucidum nepalense*. Dark, blackish green color. Medium size, pointed leaves, borne very thickly on the upright curving branches. For medium plantings this is the ideal shrub, better than the choice lilacs of northern usage. Comes between the tall stiff Upright type and the compact form of the Griffigs Wax. Makes the best show of any evergreen obtainable at the same cost. We have large blocks of beautiful plants to meet the heavy demand created since our introduction of this excellent type.

Removing the Root System
without Shock

No Roots exposed to the air.

The Dirt can't Break Away
from the Roots

UPRIGHT

UPRIGHT (Nobilis). Pyramidale, L. pyramidale vulgare. All branches grow in upright position with dark, glossy green foliage resembling the Graceful. Unexcelled for planting at high points, corners, between windows, or any point where a tall evergreen of medium narrow width is desired. Like the Graceful and Griffings Wax, it holds its leaves when balled and never fails to fill a large space in a planting with immediate effect. Our plants are showing up wonderfully in the nursery.

Fine Leaf Type

This type includes those varieties having very small foliage of light green color without the distinguishing, glossy, thick nature of other varieties. Loose growing and more open, the feathery branching is very attractive. Height varies from medium to tall and is readily controlled by pruning.

AMUR. (*Ligustrum amurense*) **Amoor River Privet.** We list only choice, bushy stock, heavily foliated for good landscape effects. Grown wide spaced and well pruned.

5R5	B	XXX	1½ ft.	3.00	2.50	

Large Leaf Type

This division includes the varieties characterized by exceptionally large leaves of various thickness and finish. Color varies from dull brownish-green to golden-yellow. Height of this type is generally tall; easily controlled by pruning.

BIGLEAF

BIGLEAF. Formerly called *L. macrophyllum*. This is a grafted true type, better than any selected type of *L. japonica*. Exceptionally large leaves. Dark green, glossy above. Has very high quality and gives an entirely different appearance from the common Japanese Privet. Suited for prominent places in good plantings. Makes a very large bushy shrub. In transplanting they hold their leaves and make a big showing in new plantings.

Deciduous Shrubs

The great majority of brilliant flowering shrubs and many other ornamental varieties lose their foliage in winter (Deciduous). For gorgeous color displays they should be prominently used in landscape plantings. Their winter barren period is brief in our Southern section and the color changes in autumn make the absence of leaves in winter less lamented. Usually flowering shrubs are best planted in groups of from 3 to 20 or more.

ALTHEA

known as Rose of Sharon. Favorite old-fashioned upright flowering shrub.

ARDENS. Double; lilac with carmine center fading to a light blue violet.

BOULE DE FEU. Very double; deep red. Dwarf flower.

CRIMSON. Deep rich color.

DUCHESSE DE BRABANT. Double; red.

JEANNE D'ARC. Very double; snow white.

LADY STANLEY. Semi-double; rosy white.

PAONIFLORA. Double; white, cherry-red center. Medium size.

PINK STRIPED. Double; white, pink spots.

PRINCE LOUISE. Large, double; pink flower. Free bloomer. Dwarf habit. One of the best.

SNOWSTORM. Flowers pure white, single; blooms continuously all summer. Very effective and popular.

BEAUTYBUSH

AMERICAN BEAUTYBUSH (*Callicarpa Americana*). French Mulberry. With purple berries, produced in clusters; very effective in fall and early winter. This beautiful native plant is not sufficiently appreciated.

Key	Class	Height	Each Rate	10 Rate	100 Rate
1R5	B	3 ft.	2.00	1.70	1.40
2R5	B	2 ft.	1.50	1.25	1.00

CHASTE-TREE

CHASTE-TREE. (*Vitex agnus-castus*). Lavender Bush. One of the best deciduous shrubs for summer blossoms. We have very strong plants, well branched, stocky. Fine for color effects in masses. Blossoms lavender, born profusely.

Key	Class	Quality	Height	Each Rate	10 Rate	100 Rate
1R5	B	XXX	5 ft.	4.00	3.40

5R5	N. B.	X	2 ft.	.60	.50	.40

CORALBERRY

CORALBERRY (*Symphoricarpos vulgaris*). Fine for border, foundation or mass planting: red berries remain on all winter. As a colorful border of taller plants they are unexcelled. When placed in front of taller growing conifers, they make pictures of unusual beauty. Foliage is dense, light green, pubescent underneath.

Key	Class	Quality	Height	Each Rate	10 Rate	100 Rate

CRAPE MYRTLE

CRAPE MYRTLE (*Lagerstromia indica*). The favorite flowering shrub of the South, hardy and heavy bloomer, it paints the landscape in summer months with its brilliant blossoms in tones of crimson, red, pink, purple, and other shades. Frequently termed the "Lilac of the South."

Griffing Dwarf Crimson Crape Myrtle—One of the Prettiest and Best Shrubs.

Graceful flowering shrubs with attractive foliage enhance the beauty as well as the value of the home. Make liberal use of them.

Plant in groups of 3 to 20 among your evergreens for wonderful effects and colorful contrast.

Griffings Crape Myrtle in Nursery Row. Compact Stocky Bushes are Produced by Expert Care

DWARF BLUE

DWARF BLUE CRAPE MYRTLE. A genuine dwarf and in great demand because of the distinctive, unusual color. We have never been able to supply the demand. This year we offer immense blocks of heavy branched plants for good effect the first summer. Pruning has increased the natural compact nature. This is going to be one of the most popular flowering shrubs. Use them generously for blue color.

Key	Class	Quality	Height	Each	10	100

5R5	N. B.	X	1½ ft.	1.75	1.50	1.20

GRIFFINGS CRIMSON

GRIFFINGS CRIMSON. The watermelon pink or cerise color so much desired is very pronounced in this variety. The flower heads are exceptionally large and fluffy, the color rich, clear and bright. No shrub makes such a gorgeous display in a planting as this. The compact natural growth is easily controlled by pruning so as to make a very dwarfed plant. We prune our young plants several times to induce thick branching with dense foliage and many flower buds. Interplanted with evergreens, beautiful effects are obtained. Massed in groups of any size, a display of color unrivaled is had the first summer. The crape myrtle is the lilac of the South. They deserve the most generous usage and the demand of recent years indicates its great popularity. Our type is recognized by our trade as being the best on the market. For big developments, sub-divisions, parks, etc. they can be used by the thousand to great advantage. As a shrub to alternate with street trees they have met wide favor.

PURPLE

PURPLE. The rich color of this variety is very desirable. In background it adds distance. the distribution is much less than that of other varieties, hence making it a novel addition to most plantings. The shade of purple is rich and bright in our type, not a faded out magenta so often seen. Combinations of crape myrtle colors make the most exquisite effects obtainable with southern material.

Otaska Hydrangeas and
Climbing Fig Vine

Hydrangea

HYDRANGEA. (*Hydrangea opuloides*). Best of French variety especially adapted for the Gulf Coast Sections. The large heads of white, pink and blue are exquisite. Hydrangeas appear at their best when planted in groups in particularly shaded places. Hydrangea colors are uncertain blooming pink in chain soils and blue in others, so we cannot guarantee specific colors.

Evergreen Shrubs Two Years After Planting

Hedge Plants

Amur Privet Hedge

Beautiful effects are gained with hedges and opportunities for their use are numerous. Many shrubs are suited for hedges of either formal (Sheared) or informal or natural (Unsheared) kind. We are offering the most generally used hedge plants under this division but we grow such quantities of all good varieties that we can supply Crape Myrtles, grafted evergreen Privets and other plants for this purpose in unlimited quantity. Hedges usually are slow in development. A great deal depends on the stock planted. Heavy, fibrous root systems mean quick, rank growth. We offer stock that is exceptionally well adapted for hedge planting and will quickly produce results you want.

AMUR RIVER PRIVET
HEDGE IN BLOOM

PRIVET

AMUR PRIVET (*L. amurensis*). Amour River Privet. Most popular hedge of the South. Very beautiful, practically evergreen, dense in growth, very compact and establishes a very good hedge in one year. Hardy and adapted to general planting. Permits shearing to any height or shape. Pruning the first year should be very frequent, keeping new growth cut back at all times, just permitting about $\frac{1}{2}$ inch of new growth to remain after each pruning.

Key	Class	Quality	Height	100 Rate	1000 Rate
1R5	2 yr.	X	4 ft.	.40	.24
2R5	2 yr.	X	3 ft.	.25	.16
3R5	1 yr.	X	2 ft.	.18	.12
4R5	1 yr.	X	1 $\frac{1}{2}$ ft.	.15	.10

BAMBOO

BAMBOO. Dwarf and medium growth classes. Bamboo can be sheared and made into living green walls, very high and narrow, or rounded and full. A stately appearance due to the large size is obtained better than with other hedges. The dwarf kind can be kept three to six feet high and very compact. Is unusual and due to the ease with which it is grown, makes an ideal hedge for many purposes. Informally grown (without shearing) it makes splendid screens and borders of great beauty.

Key	Grade	100 Rate	1000 Rate
1R5	Divisions 6-8 stalks	.25	.15
2R5	Divisions 4-6 stalks	.18	.12
3R5	Divisions 3-5 stalks	.15	.09

CAMPHOR

CAMPHOR (*Cinnamomum camphora*) for hedges. For the southern territory the camphor is an ideal hedge plant. Light green with beautiful color variations, it can be sheared into any form and kept at any height. Green and bright at every season, it gives an appearance of quality and unusual beauty not attainable with more common hedges. Can be grown very wide or very narrow and two feet or ten feet high. Growth quite fast. For cemeteries, public grounds, large homes, etc., it is an ideal hedge.

Key	Class	Quality	Age	Height	10 Rate	100 Rate
1R5	N. B.	X	1 yr.	18"	.25	.18

Camphor Hedge

Showing Value of Vines.
in Landscape Planting.

Vines and Creepers

Beautiful, artistic vines quickly make beauty spots of each nook and corner, hide all unsightly views, and surround the home with colorful, fragrant blossoms.

CAROLINA-JESSAMINE (*Gelsemium semper-virens*). Yellow Jasmine. This beautiful native of the South is one of the best vines grown. Beautiful yellow golden blossoms in early spring, delightfully perfumed. Very hardy and thrifty. For arbors, pergolas, porches, etc., it is excellent. Planted among shrubs and trees where it clambers among them, giving unity to the group.

Creeper, Englemann (*Ampelopsis quinquefolia englemanni*). One of the best creeper type vines for walls and columns.

Creeper, Painted Trumpet (*Bignonia speciosa*). Orange colored, trumpet shaped blossoms. Grows on wood walls.

Creeper, Virginia (*Ampelopsis quinquefolia*). The old reliable creeper for general use.

HONEYSUCKLE (*Lonicera Japonica*). The favorite of grandmother's day and unsurpassed for evergreen foliage and fragrance. Used for beauty over bare corners, on fences, in trees, among the shrub borders, and it makes a beautiful hedge when planted closely without support. Use them to cover wire and board fences.

IVY, ENGLISH (*Hedera helix*). Evergreen thick, leathery leaves.

IVY, BOSTON (*Ampelopsis tricuspidata*). Japanese Creeper. For walls. Bright autumn color.

WISTERIA

WISTERIA (*W. sinensis*). Well known woody vine with beautiful blossoms in spring. Picturesque among conifers or on pergolas, porches, etc.

BEAN, KUDZU

BEAN, KUDZU (*Phaseolus thunbergiana*). When established this is one of the fastest growing vines for porch, fence, arbor or pergola planting.

Bamboos and Grasses

and Miscellaneous Plants

These beautiful, **graceful plants** are of the greatest value in landscape planting. They are entirely hardy, easily grown, give beautiful effects and fill large spaces. No other plants make such a **big display** for the low cost. In shrub borders, for backgrounds, screens, hedge rows, etc., or for fine **big specimens** on the lawn they answer every demand. We have ideal conditions for their production and offer **fine, rich colored, vigorous plants**. The best varieties are offered.

BAMBOOS

FEATHER. (*B. vulgaris*). Large graceful green foliage and stems, feathery appearance.

NINGALA (*A. falcata*). Medium growth, green foliage and stems.

SILVERSTRIPE (Hort. var. of *A. Simoni*). Silver or white stripe in leaf, otherwise like the Feather variety.

GOLDEN (Hort. var. of *B. vulgaris*). Stems golden, penciled with green. Foliage green.

Griffings Everblooming Roses

We have always been leaders in rose production. In the early days of our history we gave quantity production our attention and grew tens of thousands in scores of varieties. In recent years we have specialized in the production of a limited list, including those with which the average home grower can usually have splendid success. Our long experience has shown us that while every variety of rose has some difference, a list of two or three dozen varieties usually includes those accepted as standards and gives ample range of choice in colors, and other characteristics. Throughout the South the Griffing Roses have been the choice of thousands for forty years.

Classification: Roses are descended from several distinct classes or families and the following key will enable one to find to which strains or classes each belongs. (H.P.), Hybrid Perpetual; (H.T.), Hybrid Tea; (B.K.), Banksian; (Bour.), Bourbon; (Beng.), Bengal; (N.), Noisette; (Poly.), Polyantha; (H.Ch.), Hybrid China; (H.N.), Hybrid Noisette; (T.), Tea; (Cl.), Climber; (H.W.), Hybrid Wichuraiana; (Laev.), Laevigata.

We prune all our roses ready for planting unless instructed not to.

All of our Roses are Grafted or Budded Field Grown Bushes, Strong and Vigorous.

EULALIA

EULALIA (*Miscanthus*). A beautiful plant for specimens. Very airy and graceful. Beautiful effect at low cost. We offer **Maiden Grass** which is solid green in color; **Striped Grass**, which has white pin stripes lengthwise of the blades; and **Zebra Grass** which has white bars cross-wise of the blades. These varieties offer variation in effects and have great value in landscape plantings.

2R5	B	Medium Clumps	1.00	.85	.70
3R5	N. B.	Small Divisions	.70	.60	.50

PAMPAS GRASS

PAMPAS GRASS (*Cortaderia*). Plume Grass. **Fountain Grass.** Beautiful long blades of light green giving a fountain-like effect. The large plumes of creamy white produced in summer make wonderful pictures in the planting. **Fine for specimens.** Very popular and in great demand.

Key	Class	Grade	Each Rate	10 Rate	100 Rate
1R5	B	Large Clumps	2.00	1.70	1.40

A TRIAL ORDER OF OUR BALLED EVERGREENS WILL CONVINCE YOU

VARIETIES OF ROSES

ALEXANDER HILL GRAY. (T.) Deep lemon-yellow which intensifies as blooms develop; flowers large, of great substance and perfect formation; it has high-pointed center from which the petals gracefully reflex. Strong, upright growth. Vase rose. Price Group 1.

AMERICAN BEAUTY, WHITE. See F. K. Druschki. Price Group 2.

ANTOINE RIVOIRE. (H. T.) Creamy-white, delicately tinted with pink, extra large petals, making blooms of decidedly distinct and beautiful form; full and double. Vase rose. Price Group 1.

BLACK PRINCE. (H. P.) Velvety crimson with shadings of purplish-black. Upright, strong fusion of flowers. Price Group 1.

CL. BRIDESMAID. (Cl. T.) Pink, with soft yellow shadings at base of petals. A good, vigorous climber and constant bloomer. Price Group 2.

CL. CAROLINE TESTOUT (Cl. T.) Delicate pink. Vigorous climber producing abundance of large cup-shaped blossoms. Price Group 2.

C. AMERICAN BEAUTY. (H. N.) Same size, color and fragrance as American Beauty and an excellent climber. Price Group 2

CL. WOOTEN. (Cl. T.) Bright magenta-red passing to violet crimson. Richly shaded. Profusion of flowers. Price Group 1.

DUCHESS DE BRABANT. (T.) Exceptionally healthy, vigorous and productive. Soft, light, rose with heavy shading of amber-salmon. Beautiful in bud and bloom. Good yard and cut flower rose. Price Group 2.

ETOILE DE FRANCE. (H. T.) Clear, velvety crimson. Cupped buds borne on stiff stems. Deliciously fragrant. Vigorous grower and profuse bloomer. Medium spreading growth Price Group 1

EUGENE FURST. (H.P.) Deep red, shaded crimson; a profuse bloomer; fine form; large and full. Price Group 2.

FRANCES SCOTT KEY. (H. T.) Red, shading to cerise, very large with a profusion of petals opening to a high center. Easy of culture, a most acceptable addition to the rose garden. Price Group 1.

FRAU KARL DRUSCHKI or WHITE AMERICAN BEAUTY. (H. P.) One of the purest white roses, known also as Snow Queen. Very large blooms, on good stiff stems with splendid foliage. Good, upright grower. Price-Group 2.

GENERAL JACQUEMINOT. (H. P.) Bright shining crimson, very fragrant, free bloomer. Upright grower. Price Group 2.

HOOSIER BEAUTY. (H. T.) Glowing crimson-scarlet with darker shadings; buds of good length and splendid shape. A strong and clean grower, producing long, stiff stems. Price Group 1.

JONKHEER J. L. MOCK. (H. T.) Clear imperial pink. Blooms are of the largest size, highly perfumed. A Gold Medal winner. Price Group 1.

KAISERIN AUGUSTA VICTORIA. (H. T.) Pure white; splendid large buds; double blossoms making the choicest vase flowers. Price Group 1.

LADY HILLINGDON. (T.) Deep apricot yellow to orange; long, pointed buds; a very free-flowing variety and striking decorative rose, sturdy, spreading growth. (Similar to Sunburst). Price Group 1.

LUXEMBOURG. (H. T.) Yellow, proving to be one of the best. Long stems, pointed buds. Excellent for cut flowers. Upright grower. Price Group 1.

MAMAN COCHET, WHITE. (T.) Pearly-white with exquisite shadings of delicate pink, of same habit as the Pink Cochet. It is easily ranked as one of the few best white roses. Price Group 1.

MARECHAL NEIL. (Cl. N.) Golden yellow. The grand old Southern favorite with a fragrance equalled by none. Double blooms. Price Group 1

METEOR. (H. T.) Velvety crimson; large well-formed bud and flower. Vigorous upright grower. Healthy, dark green foliage. Price Group 2.

MINNIE FRANCES. (T.) Rich chamois-red, shading to velvety crimson. Most vigorous grower of any we have ever known, making quite a shrub in a few seasons. Covered with blooms all the year. Buds daintily long and pointed. Introduced by Griffing Bros. and named for their sister. Price Group 2.

MRS. A. R. WADDELL. (H. T.) Rosy-scarlet, opening coppery-salmon. Long and pointed buds; large semi-double, showy. Rampant grower. Price Group 2.

MRS. CHARLES BELL or "SHELL PINK RADIANCE." (H. T.) Shell-pink on a salmon background, otherwise same as Radiance from which it is a sport. Newest member of an illustrious family. Price Group 1.

MRS. DUDLEY CROSS or HELEN GOOD. (H. T.) Beautiful creamy-white with delicate edging of carmine at edge of petals, base of petals rosy yellow. Fine-formed buds. Good bloomer; double. Good vase rose. Strong vigorous grower of spreading habit. Perfectly thornless. Price Group 1.

PAUL NEYRON. (H. P.) Deep, rosy-pink, large double blooms with spicy fragrance. Roses borne on strong upright stems. Vigorous upright grower, constant bloomer. Price Group 2.

SUNBURST. (H. T.) Rich coppery-yellow, shading to golden-yellow. Long pointed buds. A dream in intense colorings. Small spreading growth. Price Group 1.

THE GREAT TRIANGLE GROUP

For outdoor culture in the South, we consider these the BIG THREE of all roses. For cut flowers they lead the field. Florists are depending on them (cut right from the open) for the greatest part of the year. Wonderfully free bloomers, strong growers, large shapely buds and full flowers on stiff stems.

POSITIVELY THE MOST POPULAR ROSES IN THE WHOLE COUNTRY TODAY.

RADIANCE. (H. T.) Flowers are a beautiful shade of the richest tone of pink, darker on the inner surface of the petals than on the margins. The buds are large and very fine. There is no finer rose grown than this. Price Group 1.

RED RADIANCE. (H. T.) Stands among red roses without a superior. It has flowers of the same exquisite form, the same sweet perfume, as Radiance. The color is a splendid, even shade of clear red, without a trace of any other color, retaining its vividness for an unusually long time after being cut. It is a remarkable bloomer, being constantly in flower from early spring until freezing weather. Price Group 1.

SHELL PINK RADIANCE. See "Mrs. Charles Bell."

Griffings Hardy Palms

FOR OUTDOOR PLANTING

The hardy Palms we list are safe for outside planting from the Coast back about 150 miles and should be extensively planted in the home grounds, parks and streets, and there is nothing that gives a more **inviting, tropical effect to our Northern visitors** than to come where they may be among the waving Palms and enjoy the mild winters of the Southern climate.

BLACKBURN PALMETTO

Rich green leaves and stems. Attain considerable height. Very hardy. A beautiful palm for any position where the fan leaf type is wanted. Is especially recommended for the northern border of the palm belt.

Key Class	Caliper	Height	Each	10	100
			Rate	Rate	Rate
1R5	B	9 in.	6 ft.	10.00	8.40

4R5	B	2 in.	2 ft.	2.00	1.70

MEXICAN WASHINGTON

MEXICAN WASHINGTON (*Washingtonia robusta*). The palm that made California famous as the Palm State. Very attractive. The tallest growing variety, fan leaf type. The leaves never turn yellow. We have some very large specimens which have met with favor with our trade and we offer them in limited quantities, for immediate effect.

Key Class	Caliper	Height	Each	10	100
			Rate	Rate	Rate
1R5	B	24 in.	8 ft.	24.00	20.00
2R5	B	18 in.	8 ft.	18.00	15.00

				8.40

CANARY DATES

CANARY DATE (*Phoenix canariensis*). Pinate leaves. The most ornamental variety of all. For lawns and boulevards it has the greatest popularity, graceful recurved leaves, growth remarkably rapid, general appearance very dark green. Our palms grow very stocky in the heavy black land, having strongly developed leaves and large thick, pronounced trunks. More leaves according to caliper than on the palms grown in the more southern sections where development is quick and very tender. The same grades we offer when compared with others we have seen are worth three times as much.

Key Class	Caliper	Height	Each	10	100

What is More Beautiful Than Washington Palms?

Shade and Ornamental Trees

ARIZONA ASH

ARIZONA ASH (*Fraxinus velutina*). Evergreen Ash. Griffing's Rio Grande Ash. *Fraxinus Rio Grande*. Each year the popularity of this tree increases remarkably. Not entirely evergreen, it is the first to come into full leaf in spring. Several weeks ahead of most trees. The foliage is a very light, bright green. Later in the season the foliage is darker, the upper surface of the leaves being quite glossy. The bark is grayish-white. Very attractive. The foliage falls after all other deciduous trees are bare. Makes nice lawn or shade tree in two or three seasons.

Key Class	Caliper	Height	Each	10		100

OAK

OAK, LIVE (*Quercus virginiana*). The grand old evergreen of the South unexcelled in the tree world for beauty and desirability. For large lawns and wide parkings no better trees can be recommended. After attaining several inches caliper they grow quite fast, contrary to the usual idea. We have never seen prettier, straighter, better headed trees than we are now offering in all sizes. Due to the heavy black land in which they are grown and the six foot spacings allowed the larger trees, we can dig the largest size with fine balls of soil, and supply our customers with trees ten and twelve years old, sure to grow and make a fine showing. Live Oaks should be planted in great quantities in every town in the South.

Key Class	Caliper	Cut to	Each	10		100	
				Rate	Rate	Rate	Rate

LOMBARDY POPLAR

POPLAR, LOMBARDY (*P. nigra*). In landscape jobs few trees have the value of Lombardy Poplars for quick effects. They show up the first season and give skyline and background long before any other variety can be grown to any considerable height. We have ideal conditions for the production of these trees and they make stocky trunks, are thickly branched, and unusually strong and vigorous. Balled trees will make remarkable growth the first year. For formal effects they are used where Italian Cypress would be too expensive. Among groups of shrubs they give variety and interest to the plantings. Last year we had to reserve blocks which were in strong demand in order to produce big trees for this year's use.

TALLOWTREE

TALLOWTREE (*Sapium sebiferum*). Chinese Tallow. Compact, dense head of small bright green leaves. A beautiful shade tree and very desirable for streets or avenues, anywhere in the South. Highly desirable for any purpose.

Attains 40 ft. Cleanest of deciduous trees. In mid-summer and late fall when so many trees have yellow and brown falling leaves, the Tallowtree is beautifully fresh and green.

Tallow Trees We Planted Highly recommended in Modern Subdivision for avenue planting.

Fruits, Nuts and Berries

While we have greatly extended our business in Ornamentals and Roses during recent years, we have by no means neglected the great commercial Horticulture so important to the South. We are constantly building up and increasing the production of Pecan Trees, Fruit trees, Grapes and Small Fruits, for we find as those planted a few years ago come into bearing in all parts of the South, it is almost impossible to keep up with the demand. So while we love the Ornamental side of the business, we have no inclination or could not afford to neglect the Fruit and Nuts.

OUR RECORD

The Griffing Nurseries have grown, distributed and planted more fruit and nut trees in the South than any other nursery or organization. This is a record which we are proud of and justly so.

Berry Plants

The fields and woodlands of the lower South are the native home of **Dewberries** and **Blackberries**. There is no place in the world where they are more productive or the quality better.

The improved cultivated varieties offered here are the choicest of their kind and a few plants will give you many dishes of choice fruit during the season.

CORY THORNLESS BLACKBERRY. Mr. Cory, the introducer, says that **Thornless Blackberries** are not an experiment any more; they are a fact. They have proved themselves to be superior in every way. Better flavored, heavier producers, better shippers and canners. Th introducer discovered them at Jamestown, California. They produce a good crop the third year after planting. Ripens about June 1st, and continues to bear until August. The berries are very large and grow in clusters, making very easy picking.

PARKER THORNLESS DEWBERRY. Mr. Jim Parker of Oklahoma, the introducer, says this is going to be the best and earliest berry in the South. Prolific bearer, fine flavor, large size berries.

Price of Cory Thornless Blackberry and Parker Thornless Dewberry:

Figs
The Fruit for the South

Young Fig Tree with Fruit duced per acre.

No fruit is more valuable in the Southern fruit garden than Figs. No home pantry is complete without canned and preserved figs for winter use. Figs come into bearing very early, and for that reason commend themselves to the home grower. With proper selection of varieties fruit may be secured from June to November.

Fresh figs on the market meet with ready sale for preserving and table use. When properly packed they can be transported several hundred miles.

Commercial fig growing for supplying preserving plants is gradually extending throughout the South. Plantings should be made on heavy soils. They can be planted 10 to 12 feet apart in rows 15 to 18 feet. The yield is very heavy, thousands of pounds of fruit being pro-

Celestial Figs

They require good fertilization, intense cultivation, heavy pruning (Magnolia variety) and if regularly sprayed with Bordeaux Mixture, will hold their foliage late in the season, greatly extending the producing period.

BRUNSWICK. Large, purplish-black; good quality; early bearer; ripens throughout the season.

CELESTIAL. Sometimes called Little Sugar Fig; the sweetest of all varieties. Ripens in mid-season.

LEMON. Large, lemon colored, retaining natural color when preserved. Ripens early.

GREEN ISCHIA. Light, transparent-green flesh crimson. Best extremely late fig. Prolific; bears young.

MAGNOLIA. Large size, light colored. Vigorous grower; prolific; excellent for preserving, this variety being one of the favorites with Texas planters on black waxy land.

Grapes

In the lower South two distinct types have proven their worthiness for general planting, and in no section can a greater quantity of the choicest fruit per acre, be produced. The grape should be more generally planted in the home garden and commercial vineyards. Every home in the South should have a shade arbor of some strong growing variety of grapes.

SOUTHERN MUSCADINE CLASS

This class of grapes is native to the South and is well known and loved by all southern people. Fruit clusters not so large as the Bunch varieties, but the flavor is excellent. For jellies, preserves, grape juices, wines and table use

they are unexcelled. Usually trained on overhead arbors 6 1-2 or 7 feet high, consisting of post with wire or wood framework. Pruning is not commonly practiced. Plant 20 to 30 feet for arbors.

GRAPES (Continued)**BUNCH CLASS**

Not all bunch grapes are at home in the South but many grow here to perfection and can be planted in back yards or in commercial plantings with assurance of prolific bearing. The best trellis is the Munson three-wire trellis consisting of posts with cross-bars at top with three wires strung over tops for vine support. This type is usually planted 8 to 10 feet apart. Prune each winter, leaving runners in every direction but removing the majority of last year's growth.

MULBERRIES

For shade in backyards or lots and poultry runs, the mulberry is the best tree we know. The fruit will feed chickens or pigs for months. Mulberry trees thrive in any location.

HICK'S EVERBEARING. Enormous bearer; fruit ripening three months annually from May.

MERRITT. Finest Mulberry. The earliest variety; berries very large and full. Ripens during April and May. No farm complete without some Merritt Mulberries. A place in every home yard for this tree.

NEW AMERICAN. A vigorous grower, with fine large leaves and producing large black fruit.

PEARS

Because of blight, the list of adapted pears for the South is limited. Ours are from 'Blight Proof' strains and are highly resistant to this disease.

DIXIE. A new variety, originated in Southern Georgia. Crop is regular, very heavy, of fine quality and the trees have always been absolutely free from blight.

GARBER. Rapid grower, good quality. Ripens in September

KIEFFER. Large. The business Pear in many parts of the South. Late.

LE CONTE. Strong grower, early bearer. Fruit large. Good shipper; early.

PINEAPPLE (SAND). Name adopted by American Pomological Society. An excellent preserving or canning pear. When cooked, holds its white color, not turning brown like most varieties of pears. As an eating pear it is fine when fruit is picked nearly fully matured and ripened in a cool dark place; is an absolutely certain crop in the South. Very large, juicy, good shipper. Blight proof.

**JAPANESE PERSIMMONS**

Are destined to become one of the leading fruits of the cotton belt and the lower South. This may seem an extravagant statement, but as soon as there is enough of the fruit on the market for the people to learn the richness and deliciousness, the demand will increase far in excess of the supply. Where the Persimmon is known on the market, it finds ready sale.

GAILEY. The pollinating variety to be planted among the other varieties; one to every seven or eight is recommended.

YACHIYA. Very large, oblong. Conical with rounded point. Reddish-yellow. Trees vigorous and attractive.

HYAKUME. Very large, roundish-oblong, flattened at the ends; skin light, bluish-yellow; flesh light brown; meaty, not astringent even while hard.

TANE NASHI. The best known and most popular variety; large, conical pointed. Early bearer, early ripening and productive. Seedless.

TRIUMPH. Yellowish-red, tomato shape; fine grained and of very fine quality. The most choice of all varieties.

YEMON. Large, tomato-shaped; somewhat four-sided; flesh yellowish; generally seedless.

ZENGI. Medium size, but one of the most valuable and reliable. Tree sturdy, long lived and very prolific.

TEXAS NATIVE PERSIMMON. The many demands for this well known native fruit have induced us to grow them both for shade and fruit.

SEND YOUR LIST IN EARLY—WE WANT TO SERVE YOU

PEACHES

Every home garden should contain peach trees. It is the leading fruit of the South, viewed from the standpoint of the commercial orchardist, farmer or home planter. If the right varieties are chosen it succeeds over a much wider territory. No fruit is more healthful and no other affords more pleasure and profit for such small outlay. Plant a few new trees each year for a continual supply for home. Cultivate, fertilize and spray regularly.

Coast Varieties

For planting along the Gulf Coast the following varieties have proven most successful.

ANGEL, Freestone. July 1st. White flesh, juicy acid.

IMPERIAL. Very large, oblong, whitish yellow, washed red. Flesh white, sweet. One of the best for the Gulf section. Freestone. June 25th.

HALL'S YELLOW, Freestone, July 1st; Large; yellow, fine quality.

HONEY, Freestone. June 5th. Creamy-white, tinted red; sweet.

JEWELL, Freestone. May 15th to 30th. The earliest Peach on the market: all alone and unexcelled for Gulf Coast section where it has proved to be a great success. Medium size, light yellow; juicy, rich and melting.

PALLAS. Deep red, flesh white, freestone. June 20th to 30th.

PLUMS

The Coast Varieties of plums are becoming more popular each year and more widely planted. The trees thrive and produce well in all of the lower South

EXCELSIOR. Remarkably strong growth, fruit medium large size; reddish purple; flesh firm, yellowish. A most valuable Southern plum.

GONZALES. Very large, red, good shipper, fine quality. Originated in South Texas. June.

HAPPINESS. Very large, glowing red; flesh firm, rich, juicy. June 10.

Great Southern Peach Belt Varieties

The following varieties we recommend 100 miles and more from the Coast, on well-drained lands.

CHINESE CLING, Cling. July 15th. Very large; white, tinted red.

EARLY WHEELER, Cling. May. Finest early Peach, especially for North and Northwestern Texas. Large, with clear meat, overspread with red.

ELBERTA, Freestone. July 10th. Well known. Large, yellow flesh, red cheek. Fine shipper.

GOVERNOR HOGG, Semi-Cling. Late June. Large white, pink cheeks. Good shipper.

INDIAN CLING, Cling. August 1st. Medium; red meat. Old-fashioned Indian.

GREENSBORO. Large, good quality, bright red; flesh white and juicy. Semi-cling. June 1st.

MINNIE STANFORD, Cling. July. Large, white and yellow. Firm and delicious, regular bearer.

STINSON, Cling. October 10th. White, red cheek. Regular; one of the best all-around late Peaches.

Griffing's Paper Shell Pecans

Pecans are the Highest Quality and Highest Priced Nuts in the World.

The improved paper-shell pecan nuts hold first place and command the highest price of all the world's nuts. Pecan Nuts are in demand constantly at good prices for culinary purposes and for the making of candies, etc. Nuts are gradually taking the place of meats in the staple daily diet of the world's people. In this the pecan will assume first place, because it is the richest in nutriment of all the nuts.

Free—Special Book on Pecans—Bulletin No. 66

A special book of 32 pages devoted entirely to the growing and marketing of pecans. We will be glad to send you this book free, if you are interested in pecans.

Well Known Varieties

We could lengthen our list of varieties considerably by adding the West Texas types, but the scab is so bad on these varieties, that we do not recommend them. We grow varieties adapted to

the general South and Gulf Coast and that pecan section including East Texas to the San Antonio district and along the coast.

The A. & M. College Pecan experts say that the West Texas varieties are not adapted to the section above referred to.

FROTSCHER. One of the best known varieties; remarkable thin shell; splendid cracking qualities; large size.

PRESIDENT. This nut probably embraces more of the characteristics of a perfect nut than any other. Oblong, slightly compressed with a sharply pointed base; large size; texture fine.

SCHLEY. One of the best; kernel plump; superior in quality, richness, flavor.

STUART. A variety generally considered the standard by which our nuts are judged.

SUCCESS. Size large to very large; shell moderately thin; kernel usually plump; quality rich; flavor very good.

PECANS (Continued)

TECHE. Commences bearing very young; medium size; quality good; a profitable, practical variety.

VAN DEMAN. One of the most attractive in appearance, very rich and well flavored. Medium, large, elongated. A well known variety.

This tree produces the very finest type of full rich, meaty, kernels. Can be removed whole for candies and table delicacies. The only walnut which thrives in the South. A beautiful tree of great value for shade and ornament—a credit to any grounds.

Griffing's Special Variety Pecans Prove Best

WE GROW ALL LEADING COAST VARIETIES, BUT THESE THREE ARE THE BEST

BRADLEY

BRADLEY. The Bradley has taken prizes wherever shown on account of richness of meat. You will make no mistake in planting this variety exclusively. Shell thin, easily cracked, permitting kernels to be removed whole. Comes into bearing younger and more prolific than most other varieties.

BIG "Z"

BIG "Z". We are the exclusive propagators of the "Big Z" Pecan. Originated by Mr. Zink in Mississippi. The size averages 38 to 40 to the pound. Shell thin, appearance fine, kernel rich, yellow, crisp and of fine flavor. Very early and prolific bearer.

"KRAK-EZY"

"KRAK EZY". Very thin shell, can be easily cracked in the hand; kernel plump and sweet and can be removed whole; this is the thinnest and easiest to crack we have ever seen. A true paper-shell variety. The vigorous grower, very prolific. This variety was introduced by Griffing Bros. 15 years ago. Found a chance seedling and on account of its cracking qualities, named it "KraK Ezy."

Citrus Fruit

Everyone should plant Citrus in the Coast section of Louisiana and Texas for profit and pleasure.

For all the Black, waxy and stiff clay or shallow sandy lands in Texas and Louisiana, oranges should be budded on Citrus Trifoliate root. For Delta land along the lower Mississippi and Rio Grande Rivers, and deep muck or deep sandy soil, oranges should be budded on native Florida sour orange root.

Low-branched Orange Trees. Many years experience has proved to us that the Orange trees should be branched close to the ground. This allows you to bank dirt around them during winter months for protection.

All our Citrus Trees are Low-branched and sold according to grade, numbers and caliper size at the bud.

We Prune Bare-Rooted Citrus. From 30 to 40 percent of the growth is removed before digging.

IMPROVED SATSUMA

We have been keeping close record on bud selection of various Satsuma trees and have found a great difference in the so-called Satsuma, in its bearing qualities and hardness. One selection has developed superior qualities, and from this we have carefully propagated a few hundred trees and offer them to those who want quality and quick results.

Key Class	Grade	Caliper	Each Rate	10 Rate

CITRUS BUYERS NOTICE: We contemplate heavy orders, some large reservations already being made. For years we have been unable to meet the demand. The extensive plantings this year will be an incentive for a great additional acreage. Place your orders early to insure getting choice stock in the quantity desired.

Satsuma Orange

THE HARDY ORANGE FOR GENERAL PLANTING—IN GREAT DEMAND

SATSUMA ORANGE. The Satsuma does not do so well on any other root except the *Citrus trifoliata*. The early market Orange for the Coast sections. Satsuma is the hardiest orange known. There is no risk in growing Satsuma on *Citrus trifoliata* along the Gulf Coast. Begins bearing the second year after planting and becomes a profitable crop the third year thereafter. This is the ideal Orange to eat—the loose, tender rind or skin on the loosely adhering segments enable one to remove the segments or plugs and eat the fruit without the aid of a knife. Fruit medium size, flattened; color deep orange; flesh fine grained, tender, juicy, sweet and delicious, with a peculiar agreeable flavor found in no other Orange; entirely seedless. Tree entirely thornless.

COMMERCIAL ROUND ORANGES

LUE. Known as Lue Gim Gong from the originator. Said by Florida growers to be a leader, hardy and long season.

WASHINGTON NAVEL. The famous California Orange.

VALENCIA. Best late Orange.

CITRUS FRUITS AS DECORATIVE PLANTS

For some years we have had a strong demand for Kumquats, Satsuma and other Citrus fruits to be used as ornamental evergreens. Especially have the larger grades been used as specimens. Frequently as tub plants, they are more often used among the other shrubs. The golden fruit and the exquisite fragrance of the blossoms makes them unusually desirable.
